## THE RUBBER IS KEY

The rubber blade is the main component of every squeegee because it is the element that comes into direct contact with the glass and dirt. In the vast majority of squeegees on the market, the blade becomes deformed when it comes into contact with dirt, which is abrasive, or washing solutions, which are aggressive, or is exposed to atmospheric agents or is subjected to friction on window frames and under the eaves. This is precisely why TQR, Total Quality Rubber, came about, which makes IPC Pulex's the only rubber blade used in a total quality squeegee.
