CARBON FOOTPRINT

NEW ACHIEVEMENTS, MORE AWARENESS.

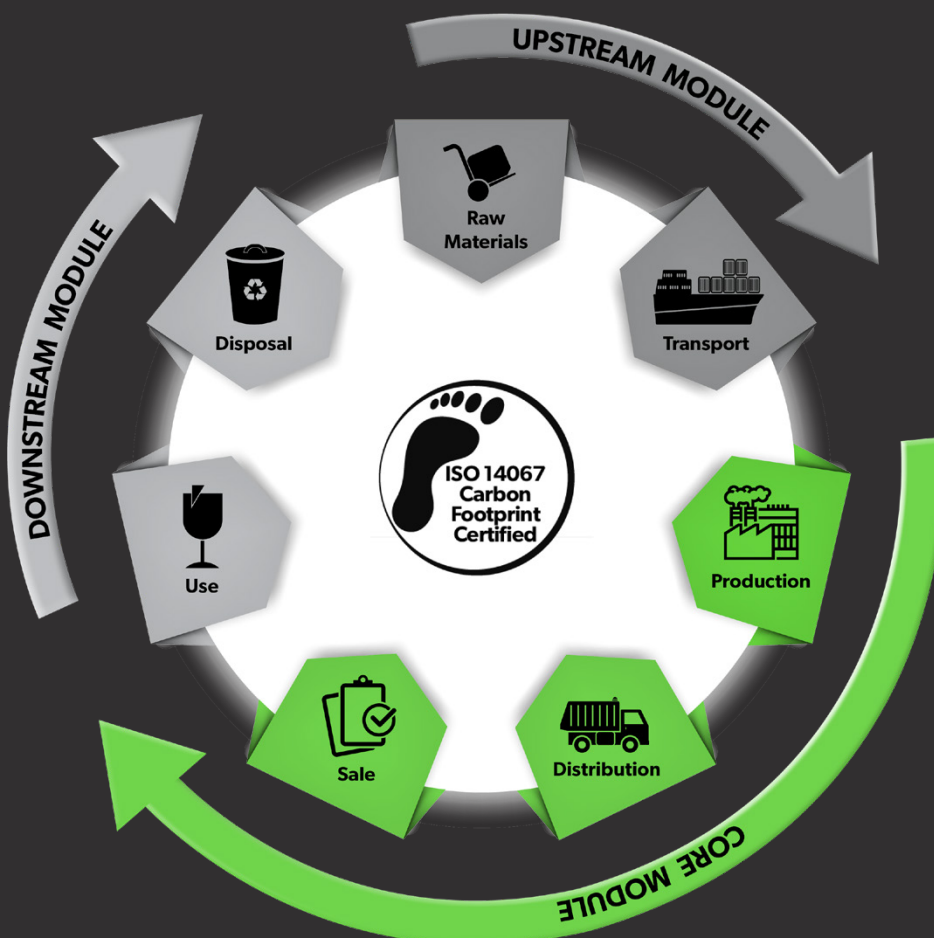

Market is day by day evolving with the urgent need to safeguard the Environment.

We can't afford to fall behind.

In IPC, **Sustainability plays a key role**: now more than ever high attention is focused on the environmental effects of the cleaning machines production.

On this regards, the last achievement that IPC has reached over the last year is the **Carbon Footprint certification**: it defines the total amount of greenhouse gas (GHG) calculated over the entire life cycle of the machine (LCA – Life Cycle Assessment).

The certification complies with the requirements of UNI EN ISO 14067:2018.

WHY IS IT IMPORTANT? FOR OUR ENVIRONMENT!

Sustainable business: knowing a machine's life cycle impact allows to perform activities that keep or reduce its environmental footprint, ensuring a sustainable and effective business for the future.

Tenders: Companies that certify their products and/or services' carbon footprint are better evaluated.

Company commitment: organizations, products and services that reduce CO₂ emissions enhance their policy and corporate sensitivity towards sustainability.

Certification: it indicates the exact quantity of CO₂ emissions in the machine's entire life cycle. Data are certified, real and reliable.

Telematics: in IPC scrubber dryers this technology allows to manage your fleet of machines remotely, monitoring the environmental performance.

THE IPC OFFER

IPC has quantified the carbon footprint of **8 scrubber dryers**. For each one, the environmental impact of **greenhouse gas emissions** (GHG emissions) on climate change is measured.

REMADE IN ITALY®

ReMade in Italy® is the environmental product certification that quantifies the content of recycled material in a semi-finished or finished product.

THE IMPORTANCE OF REMADE IN ITALY®

Coming from waste materials or by-products, **ReMade in Italy®** certified products are the result of Circular Economy, an economic model that reuses materials in subsequent life cycles, minimizing any type of waste.

This certification is a significant tool for the **Green Public Procurement**: the production is traced from the first steps to the finished products, highlighting the attention on recycling materials.

GREEN CLEANING EFFICIENCY

THE FIRST CLEANING EFFICIENCY LABEL FOR SCRUBBER DRYERS.

The Green Cleaning Efficiency label identifies the scrubber dryer machines that have **high cleaning efficiency** whilst using the least amount of energy and water. It's based on Technical Specification TS 35000 and international standard IEC/EN 62885-9.

Certifying the machine cleaning efficiency, savings of time, water and energy are guaranteed, and, therefore, it's assured a **reduction in the operating costs** of the machine itself.

CONTACT OUR SALES TEAMS FOR MORE INFORMATION ON THE CERTIFIED MODELS.
